Kl

Calculate KL University attendance percentage and exam eligibility with Simple, LTPS, ERP, and screenshot-based calculators.

Attendance Calculator
Calculate your attendance percentage and check eligibility for exams based on the University attendance policy.
ERP Login
Connect to KL ERP to fetch data automatically
Securely login to university ERP
Auto-fetch attendance and timetable

About

Kl Vercel is an attendance calculator for KL University students who need to estimate percentage and exam eligibility. It combines a simple class-count calculator, an LTPS weighted calculator, ERP login-based fetching, and screenshot OCR so users can check status against the university policy without doing the math by hand.

What is Kl Vercel

Kl Vercel is a KL University attendance calculator built to help students estimate attendance percentage and see whether they are likely eligible for exams under the

calculator, an LTPS calculator, an ERP login flow, and a screenshot-based calculator. It is aimed at students who need a quick way to understand their position before exams, especially when attendance is split across lecture, tutorial, practical, and skilling components.

The site also surfaces policy guidance directly in the interface, including the common 85% requirement, a 75–85% condonation band, and a separate policy range for law programs. That makes it more than a basic percentage tool; it is an attendance checker that combines calculation with eligibility context.

Key features

- **ERP login support**: Connect to KL ERP to fetch data automatically instead of entering values manually.
- **Simple Attendance Calculator**: Enter total classes and attended classes to get an instant percentage.
- **LTPS Calculator**: Calculate weighted attendance across Lecture, Tutorial, Practical, and Skilling components.
- **Screenshot Calculator**: Upload attendance report images and use OCR-style text extraction to work from screenshots.
- **Color-coded alerts**: The simple calculator shows eligibility status with visual warning states.
- **Multiple report handling**: The screenshot workflow includes saving and managing more than one report.
- **Policy reminders**: The app highlights the standard 85% threshold, condonation range, and a detention risk below 75%.

How to use it

Open the web app and choose the calculator that matches your data.

If you have ERP access, use **Login to ERP** to connect and let the app fetch attendance and timetable details automatically.

If you only know your totals, open the **Simple Calculator** and enter:

total classes

If your subject uses component weights, switch to the **LTPS Calculator** and enter attendance for each part:

- Lecture
- Tutorial
- Practical
- Skilling

If you have an attendance report image, try the **Screenshot Calculator** and upload the screenshot for text extraction and subject-wise calculation.

Review the percentage and the eligibility indicator, then compare it with the policy note shown in the app.

Who it is for

KL University students who want a fast attendance estimate before exams.

Students in LTPS-based courses who need a weighted calculation instead of a single class count.

Learners checking condonation risk who want to know whether they are near the 75% or 85% boundaries.

Students with ERP access who prefer automatic data fetches over manual entry.

Users with attendance screenshots who want to turn report images into usable numbers.

The tool is especially useful when different subjects use different attendance structures or when you need a quick second check against ERP data.

What to know before you use it

The app is designed around **KL University attendance rules**, so it is not a general-purpose campus attendance tracker.

It presents policy guidance such as **85% for most programs**, **75–85% condonation**, and a **70% minimum for certain law programs**, but those rules can change and should be verified against the university's current official notice.

The screenshot workflow relies on automated text extraction, so image quality,

The ERP flow depends on successful login and available university data; if ERP is unavailable or incomplete, the result may not reflect the latest official record.

The app can help estimate eligibility, but it does **not** replace the university ERP, dean's office, or official attendance statement when you need final confirmation.

Because attendance decisions can depend on fines, condonation rules, medical documentation, or program-specific exceptions, use the university's official source for any final academic or disciplinary decision.

In short, KI Vercel is best used as a practical attendance checker and exam-eligibility calculator for quick planning, while the official KL University system remains the source of record.
